Foreword

One of the core functions of the Agriculture and Food Authority (AFA) is to keep reliable database information on Scheduled Crops as contained in the Crops Act 2013. Subsequently, in the Crops (Coffee) (General) Regulations 2019, Article 4 (2) (e) states that the Authority shall collect, collate and maintain a data base and disseminate information on the coffee industry. The Coffee Directorate's mandate is to develop, promote and regulate the Kenyan coffee industry and has been publishing and disseminating coffee information critical for policy and strategy formulation to aid in decision making.

The Directorate is therefore pleased to publish and share with the public the Coffee Year Book for the year 2021/22. This year book provides a reliable statistical information and reference points to all stakeholders on Kenya's coffee industry. This milestone publication has culminated into the Directorate's sustained efforts in consulting and engaging with stakeholders for a reliable industry database.

The Directorate would like to thank the National Government, the county governments within coffee growing regions, all coffee value chain players, key strategic partners including among others, Kenyan universities and other institutions of higher learning for their invaluable support during the data collection, collation and validation which immensely improved the quality and the content of this annual publication.

On behalf of the Directorate and on my own behalf, may I take this opportunity to extend my appreciation to the Ag. Director General, Agriculture and Food Authority (AFA), Coffee Directorate staff, and all stakeholders who contributed in making this publication a reality. It is my sincere hope that readers will find this yearbook invaluable. Finally, the Directorate would like to get, through the contacts provided at the back of this book, feedback information from the users of this book which could help to improve the content and quality of the future publications.

Dr. Benson Apuoyo, PhD.
Ag. Director, Coffee Directorate

Acknowledgements

I wish to thank all coffee value chain players for their support and cooperation during data collection for the publication of the Coffee Year Book-2021/22. I also take this opportunity to appreciate the facilitative role played by both the Director General and Director Coffee in supporting the publishing of this year book. In addition, I recognize the critical role played by all Head Office and Regional Offices staffs during data collection and the validation workshop which culminated in the publishing of this year book. My sincere gratitude goes to the Directorate's statistics section for key role in the collection, analysis, compilation of data towards this year book. Special appreciation to Dr Javan Chemiat for production of maps, Ms Lucy W. Muriithi (CRI) for providing production costs and Mr. Paul Okewa for compiling the Coffee Year Book.

Erick Onyuka

Ag. Deputy Director, Technical and Advisory Services (TAS)

Highlights for Coffee Year 2021/22

- The 2021/22 coffee year can be described as historic. There was an increase in coffee production by 50.24% which was the highest crop recorded per year in the last two decades in Kenya. The national production increased from 34,512 MT in coffee year 2020/21 to 51,853 MT in coffee year 2021/22
- The auction volumes increased from 25,126 MT (407,432 bags) in 2020/21 coffee year to 38,890 MT (630,646 bags) in the 2021/22 coffee year while the value increased by 4.3% to US\$ 227.33 million at an average price of US\$ 293.03 per 50 Kg bag compared to US\$ 141.24 million at an average price of US\$ 281.07 per 50 Kg bag in the previous season.
- The Direct sales volumes increased from 10,444 MT (174,806 bags) to 11,841 MT (197,341 bags) in current coffee year while the value increased by 23.9% to US\$ 84.55 million at an average price of US\$ 357.04 per 50 Kg bag compared to US\$ 68.24 million at an average price of US\$ 326.69 per 50 Kg bag.
- Exports during the 2020/21 coffee year were 41,797 MT valued at US\$ 292.3 million (KES 27.07 billion) which were lower compared to 42,858 MT valued at US\$ 298.6 million (KES 34.36 billion) in coffee year 2021/22.
- The closing stocks amounted to 15,072 MT equivalent to 251,205 (60-Kg bags) as at the end of September 2022.
- The highest cherry rate per kilogram during the period under review was KES130.00 compared to KES 118.60 realized in the previous season
- The national weighted cherry rate per kilogram during the period under review was KES 78.99 compared to KES 86.79 realized in the previous season.
- The number of active co-operative societies/factories increased from 500/967 to 590/1190 in the period under review.
- The mean exchange rate for coffee export of KES 115.12 per US\$ has been used for the coffee year conversion.

Executive Summary

Kenya's economy depends largely on agriculture. Since its introduction as a cash crop in 1900, coffee has remained one of the most important contributors on foreign exchange earnings, farm incomes and employment creation.

Prior to 1989, coffee was the main foreign exchange earner and contributed about 25 percent of the total export earnings. As at 1978, about 70 percent of the national labor force was employed in the agricultural sector, out of which about one third was absorbed by the coffee industry. Furthermore, the sector establishes important demand and supply linkages with the rest of the economy.

This Coffee Year Book provides information on coffee production, processing, marketing and exports. It covers activities undertaken by individual stakeholders at different levels in the coffee value chain. The stakeholders include farmers' organizations, individual farmers, millers, warehouseman, marketers and coffee buyers in

the period under review. Production from various coffee growing zones are tabulated and compared with the previous coffee year - 2020/21. The central coffee auction system trades in US\$ and coffee buyers/dealers pay for purchases in the same currency. It was observed that in the present arrangements coffee growers no longer engage with one marketer to auction their coffee due to the intricate and unique nature of marketing Kenya's coffee.

The Coffee Year Book also describes crop status and effects of weather on production during the entire coffee year. From the auction Coffee Year Books, it was observed that some farmers continue to market their coffee under the "ZA" codes which was a general code applied to miscellaneous coffees traded under agriculture offices in the past. Its recommended that since licensing of pulping stations is a devolved function, the County Governments need to fast-track licensing of the upcoming/new estates in order to avoid deliveries using the "ZA" codes.

Introduction

The coffee subsector is regulated through the Crops Act, 2013, Crops (Coffee) (General) Regulation 2019 and its subsidiary legislation. Other related legislations include; Agriculture and Food Authority (AFA) Act, 2013, the Cooperative Societies Act, the Kenya Agricultural and Livestock Research Organization (KALRO) Act, 2013, the Seed and Plant Varieties Act, Biosafety Act 2009, Plant Protection Act, Pesticide Control Products Board (PCPB) Act, the Capital Markets Authority Act, Cap 485A, Warehousing Receipt System Act, 2019, among others.

Agriculture sector continues to play a critical role in Kenya accounting for 22 percent of Gross Domestic Product (GDP) and 27 percent indirectly through its linkages with other sectors. The sector also employs over 40 percent of the total population and more than 70 percent of the rural populace. (Central Bank of Kenya, 2022).

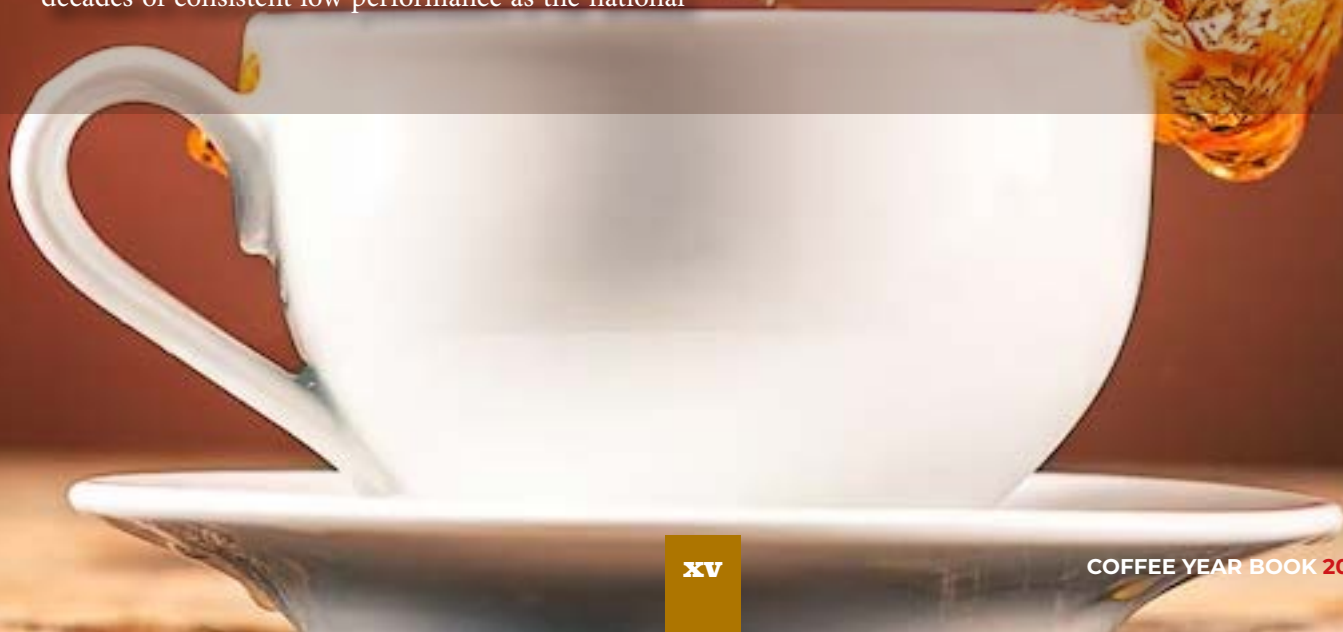

Coffee contributes 0.2 percent and is the fifth largest foreign exchange earner in Kenya after tourism, tea, horticulture and diaspora remittances. Furthermore, Coffee is mainstay of about 1.5 million households most of whom are in the rural areas. Rural areas are characterized by high level of poverty, low income, low education levels and key resources available that needs management. According to the Kenya National Population Census 2019, about 500,000 households were engaged directly in producing coffee at the farm level. The comparative coffee value contribution among the top three crops coffee, tea and horticulture increased from 13 percent in 1998 to 20 percent in 1999. Since 2003 to date, the average contribution of coffee among the top three crops has remained 9 percent .

The production for 2021/22 can at best be described as the year of a big change. Firstly, the country realized a complete recovery of production following over two decades of consistent low performance as the national

production increased by 50.24 percent. secondly, the year under review saw first harvests from additional coffee plantings areas undertaken in parts of West of Rift. More significantly, both the prices of coffee offered at the Nairobi Coffee Exchange and through direct sales remained consistently higher than those realized in the previous seasons.

Generally, the short rains were received between September 2021 and November 2021. This pattern which had low rain intensities culminated in high rates of evapotranspiration which adversely affected the bean development of September 2021 flowering. The long rains in most coffee growing counties commenced in Mid-April 2022 and continued through the month of May and June. However, observations from many parts of the country indicated that majority of the counties recorded above normal amounts of rainfall and this continued until end of the coffee year in September 2022. In summary therefore, the weather for the coffee year that just ended can be described as fair compared to the previous seasons for most coffee producing counties.

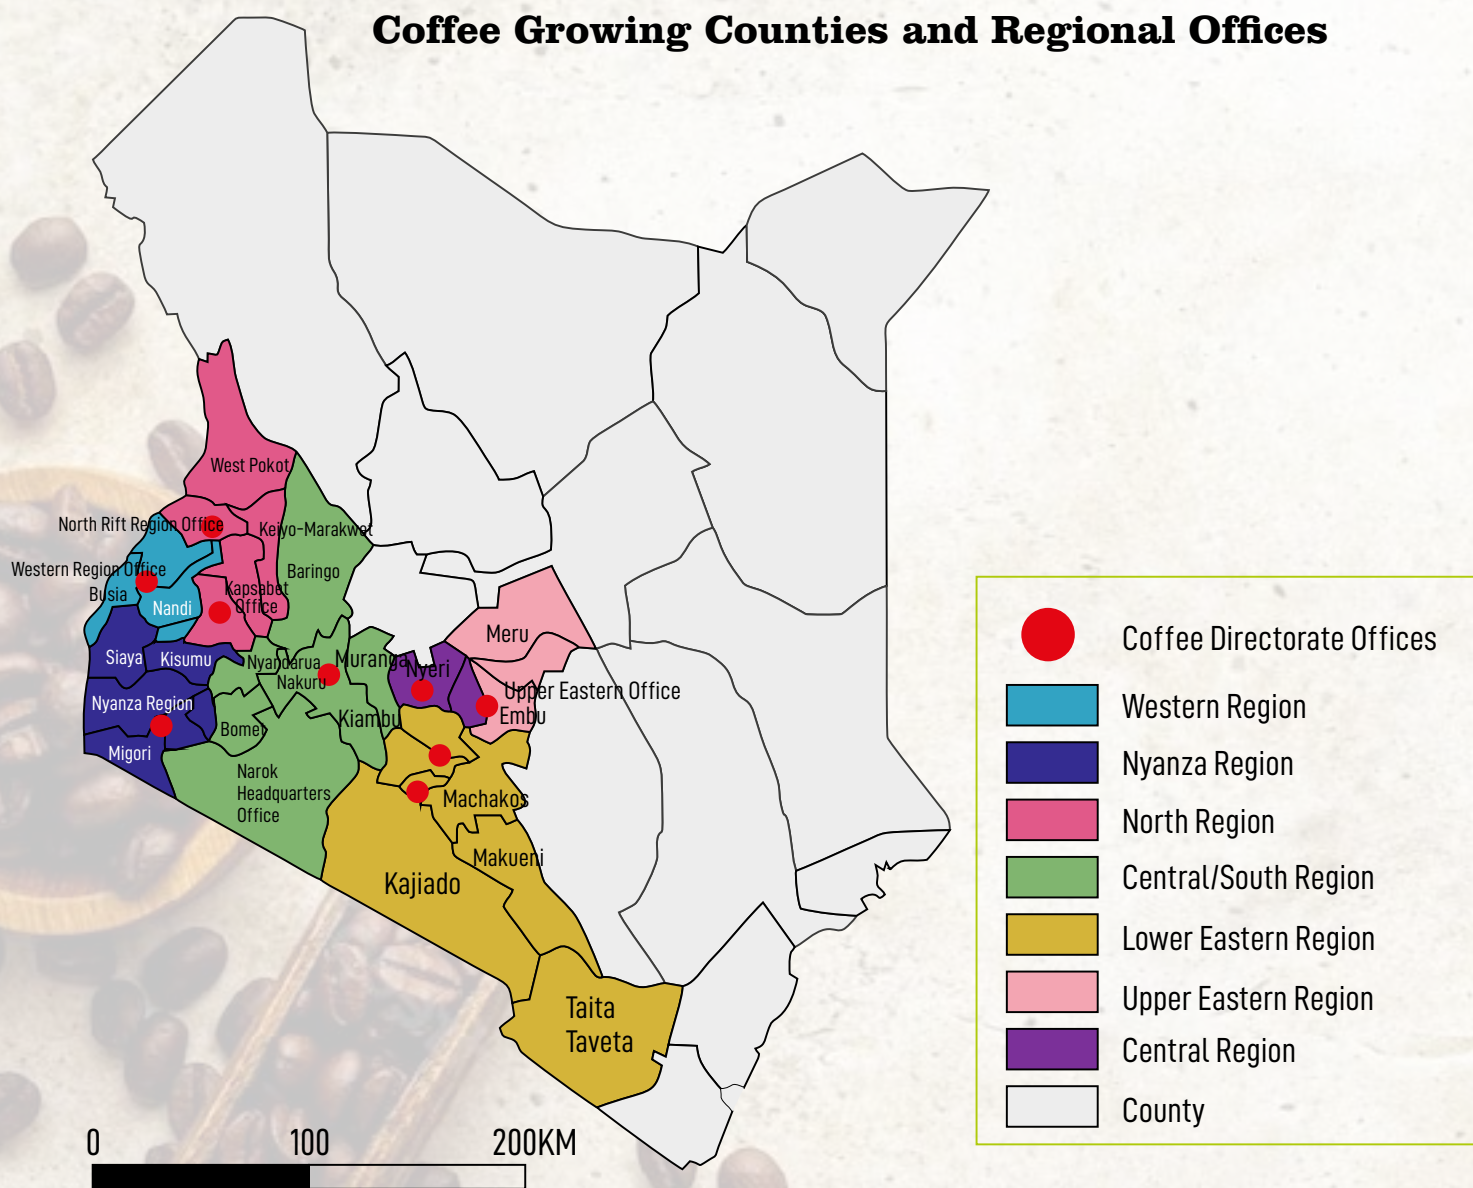

Overall coffee production increased in the year 2021/22 compared to the year 2020/21. The increase in production was attributable to among other factors favorable weather, access to subsidized fertilizer and the recent improvement of coffee prices that made farmers re-invest in their coffee farms in terms of increased input application especially top-dressing fertilizers. Even though some counties experienced slight reduction in production due to the effects of drought that largely affected production of the second crops, the good weather during the first crop (main crop) which contributes 70 percent of the overall seasonal production volumes increased in volumes. The biannual cyclic nature of production of the coffee tree also had an effect in the increase in the production.

Figure 1: Map of coffee growing counties and Directorate Regional offices in Kenya

Players in the Coffee Sub-Sector

There are a number of public institutions involved in the development and growth of the coffee subsector in the country, these include; National Government Ministries, of Agriculture Livestock State Department of Crop Development, Cooperatives and Micro Small & Medium Enterprises (MSME) Development, Trade, Investment & Industry, Foreign & Diaspora Affairs, National Treasury & Planning, State department of irrigation, State department of Youth Affairs, EAC and all the County Governments.

The Agriculture and Food Authority (AFA)-Coffee Directorate (CD) is the lead regulator of the coffee subsector in Kenya while other key Partner Government Agencies (PGAs) supporting the subsector include Kenya Agricultural and Livestock Research Organization (KALRO)-Coffee Research Institute (CRI), Kenya Trade Network Agency (KenTrade), Kenya Export Promotion

and Branding Agency (KEPROBA), Kenya Plant Health Inspectorate Service (KEPHIS), Nairobi Coffee Exchange (NCE) among others.

Private sector institutions such as smallholder coffee growers, estate growers, cooperative societies, coffee buyers, marketers, coffee millers, roasters, traders, retail chains, coffee houses, certification agents, financial institutions and Non-Governmental Organizations also play a lead role. In the crop year 2021/22, there were 1,214 licensed nurseries in the country to raise coffee seedlings for planting. Overall, the number of registered estates were 4,907 while co-operative societies were 637.

The smallholder coffee farmers are organized into cooperative societies for economies of scale. By 2021/22 there were 543 active coffee co-operative societies operating 1098 factories. Co-operative societies are member-based private entities

but have public interest. Their role is to produce, aggregate, undertake primary processing, market and facilitate access to finance and farm input for members.

Over the recent periods, some coffee cooperatives societies have shown institutional and governance weakness leading to poor financial management and administration resulting in to high levels of operational costs and indebtedness.

The number of coffee buyers in the same period was 122 although only 37 participated at the Nairobi Coffee Exchange (NCE) auction. The total number of private and commercial warehouses were 18 while 9 commercial marketers were licensed to operate at the NCE during the period under review. The number of grower marketers who obtained license to participate in direct sales remained 18 similar to the previous season.

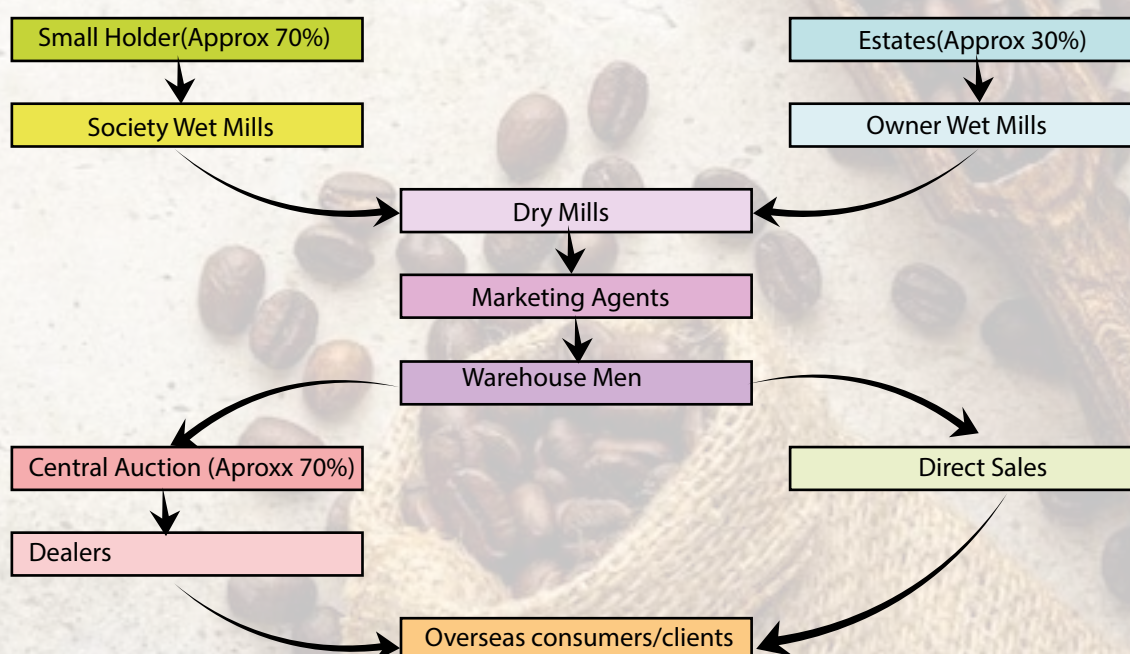

Figure 2: Coffee processing and marketing value chain

Coffee Regions Highlights

The Coffee Growing Regions

Coffee is grown in 33 counties categorized into regions namely; Central and Nairobi, North Rift, Central & South Rift, Lower Eastern, Western and Nyanza.

Central and Nairobi Region

The Central region comprises Kiambu, Murang'a, Kirinyaga, Nyeri, Machakos, Makueni and Taita-Taveta counties. The weather was generally favorable for the 2021/22 coffee year. There were adequate rains which led to good flowering and heavy crop in October-December 2021 in Kiambu, Murang'a, Kirinyaga and Nyeri counties. Machakos and Makueni counties also recorded good crop in April-July 2022. However, Kiambu, Murang'a, Kirinyaga and Nyeri counties experienced long cold and wet conditions from April to August 2022. The conditions led to increased cases of Coffee Berry Disease (CBD) infections and Bacterial blight which

reduced the second crop volumes in these counties. The relatively high rates paid for the first crop of 2021/22 encouraged farmers to invest more in their coffee farms and this is expected to be reflected in the first crop of 2022/23 if weather conditions remain favorable.

Some farmers were able to obtain subsidized farm inputs from the New Kenya Planters Cooperative Union (NKPCU). Management wrangles in farmers' co-operative societies such as Komothai and Nyakiri in Kiambu County, drought experienced in parts of Machakos and Makueni counties, encroachment of coffee plantations by real estate and aging farmers among other factors still remained some of the major challenges for this region. Coffee production in Nairobi county is mainly from the University of Nairobi farm which is facing challenges due to constrained funding, this explains the reduction in production over years while low accounting of production in Taita-Taveta and Kajiado counties is affected by their proximities to the

Kenya-Tanzania border.

Lower Eastern Region

This region comprises Meru, Tharaka Nithi and Embu counties. The region experienced an increase in production in the year 2021/22 from the main crop. The increase was due to good weather conditions which resulted in good quality and prices compared to the previous season. However, the second crop production for the coffee year declined due to harsh and dry weather conditions between April and August 2022. This resulted in coffee drying in lower Zones of Tharaka Nithi and Embu counties. In Meru, many farmers have ventured into other crops such as Miraa and banana production significantly affecting area under coffee. The unfavourable weather conditions also led to increased cases of CBD infections and blight which reduced the second crop volumes. The relatively high rates paid for the first crop of 2021/22 encouraged farmers to invest more in their coffee farms.

Central/South Rift Region

The region comprises Kericho, Bomet, Baringo, Nakuru and Laikipia Counties. The region is typically split into high and low production areas. While the production increased in Nakuru, Kericho and Bomet counties due to good weather and improved payment to farmers which enabled them to apply more fertilizer, the production reduced in Baringo and Laikipia due to harsh weather conditions and problems of insecurities experienced in the area. In this region, the production especially in Kericho county is increasingly becoming more prominent.

North Rift Region

The North Rift counties of Uasin Gishu, Trans Nzoia, Elgeyo Marakwet, Nandi and West Pokot generally registered an improvement in production in current coffee year compared to the previous coffee year because of favorable climatic conditions. The region Coffee Year Booked sufficient and well distributed rainfall throughout the year 2021/2022. In this region, Nandi county and Trans Nzoia have shown significant improvements over time.

Western Region

The region comprises of Bungoma, Kakamega, Vihiga and Busia counties. In crop year 2021/22, production in the region increased because of the well distributed rainfall throughout the year which promoted flowering, adherence of coffee farmers to good agricultural practices and access to subsidized inputs by some societies within the region. Farmers in the region are forecasting an increase in production in 2022/23 coffee year. Majority of the societies are taking initiatives to train their members on good agricultural practices while county governments in this region on the other hand are determined to promote coffee farming at household levels. In this region, Bungoma county is the top producer while others still remain perennial producers.

Nyanza Region

The Nyanza region encompasses Kisii, Nyamira, Migori, Homa Bay, Kisumu and Siaya counties. Although the region experienced an increase in production in the 2021/22 crop year, none of these counties appeared in the top ten best performing counties in coffee year 2021/22. The region borders Lake Victoria belt which is not known to be favorable to Arabica coffee production except in Kisii, Nyamira, Migori and parts of Homa Bay, Kisumu and Siaya. Despite the Robusta coffee variety maturing in parts of Homa Bay, Kisumu and Siaya, there is no organized processing and marketing system to absorb the production. The overall production increase in the region was attributable to among other factors the good weather conditions in Kisii, Migori and Nyamira, good farm practices, access to subsidized farm inputs and various government interventions policies. Thus, farmers got encouraged to plant more coffee trees and to

rehabilitate abandoned farms. Farmers in Siaya, parts of Homa Bay and Kisumu had low level of technical knowledge on Robusta coffee processing and marketing. This has affected overall production from this region.

Production and Marketing of Coffee

Coffee Seedlings Per County

During the year 2021/2022 the total number of seedlings available for planting was 1,438, 680. The amount was distributed in various counties with Narok leading with a total of 288,000 seedlings while Taita Taveta, Makueni and Nairobi had no seedlings being available for planting during the year. Among the most available seedlings were Batian with a total of 935,142 and Traditional varieties at 287,736 while the least available was Ruiru II at a total number of 215,802. Among the new coffee niche' like North rift frontier were seedlings for new establishment while conventional areas sought seedlings for expansion, change of orchard and refilling/gapping. Table 1 and figure 3 below give a summary of available seedlings per county for the year.

Table 1: Coffee seedlings per type per County

County	Seedlings in Nursery	Batian	Ruiru II	Traditional varieties
Narok	288,000	187,200	43,200	57,600
Baringo	110,400	71,760	16,560	22,080
Kericho	100,800	65,520	15,120	20,160
Kirinyaga	112,800	73,320	16,920	22,560
Bomet	86,400	56,160	12,960	17,280
Nandi	84,000	54,600	12,600	16,800
Bungoma	78,000	50,700	11,700	15,600
Kiambu	72,000	46,800	10,800	14,400
U.Gishu	72,000	46,800	10,800	14,400
Meru	69,120	44,928	10,368	13,824
Busia	60,000	39,000	9,000	12,000
Migori	57,600	37,440	8,640	11,520
Machakos	48,000	31,200	7,200	9,600
T.Nzoia	48,000	31,200	7,200	9,600
Kakamega	20,400	13,260	3,060	4,080
Kisii	19,200	12,480	2,880	3,840
Siaya	16,800	10,920	2,520	3,360
Nyeri	14,400	9,360	2,160	2,880
E. Marakwet	12,000	7,800	1,800	2,400
W. Pokot	12,000	7,800	1,800	2,400
Embu	10,680	6,942	1,602	2,136
Kisumu	9,600	6,240	1,440	1,920
Muranga	9,600	6,240	1,440	1,920
Nakuru	9,360	6,084	1,404	1,872
Vihiga	6,000	3,900	900	1,200
Laikipia	5,280	3,432	792	1,056

Total	1,438,680	935,142	215,802	287,736

Number of Seedlings Available During the Year 2021/22

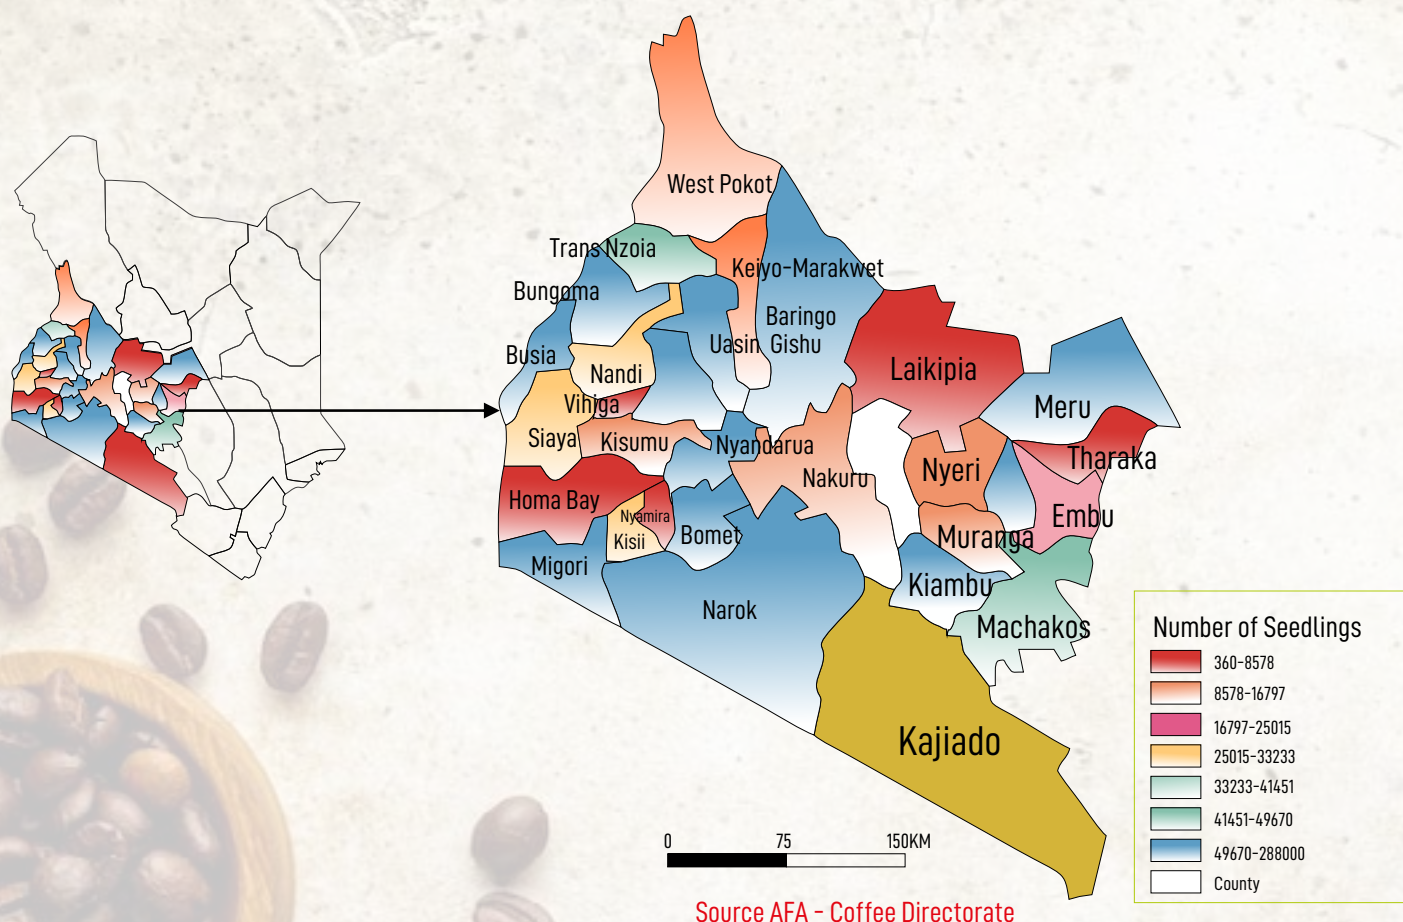

Figure 3: Coffee seedlings range per County

Area Under Coffee

The national area under coffee for both estate planters and smallholder farmers in co-operatives during the year under review was approximately 109,400 Ha compared to 108,199.44 in the previous coffee year representing an increase of 1.1 percent (1,185 ha). The total area under estates increased from 25,026.40 ha in 2020/21 to 25,288.40 ha in 2021/22 while the area under smallholder farmers increased from 83,183.00 ha in 2020/21 to present 84,025.90 ha. The area under coffee was distributed as per the county and grower category as shown in Table 3 below.

Table 2: Coffee area by County and grower category 2021/22

No	County	Estate (Ha)	Co-op (Ha)	Totals (Ha)
1	Kiambu	11,759.00	8,610.00	20,369.00
2	Kirinyaga	1,599.00	8,410.00	10,089.10
3	Nyeri	1,029.00	8,812.00	9,841.00
4	Murang'a	913.00	8,500.00	9,413.00
5	Meru	883.60	7,824.80	8,708.40

Newly planted area under coffee in Bungoma, Siaya, Kisumu and Homa Bay was mainly attributed to Robusta seedlings distribution program by the national government through the Coffee Directorate. Robusta distribution program accounted for the 28% overall increase. The higher increase in area planted in Narok county is attributable Mara Coffee company Ltd who facilitated farmer groups

with Batian coffee seedlings. There are no Coffee Year Booked plantings in Tharaka Nithi, Makueni and Taita Taveta counties. Nairobi is affected by human settlement pressure and conversion into real estate establishment. Figure 1 below illustrates newly planted area by county and grower category. New estate plantings were mainly in Uasin Gishu, Meru and Trans Nzoia.

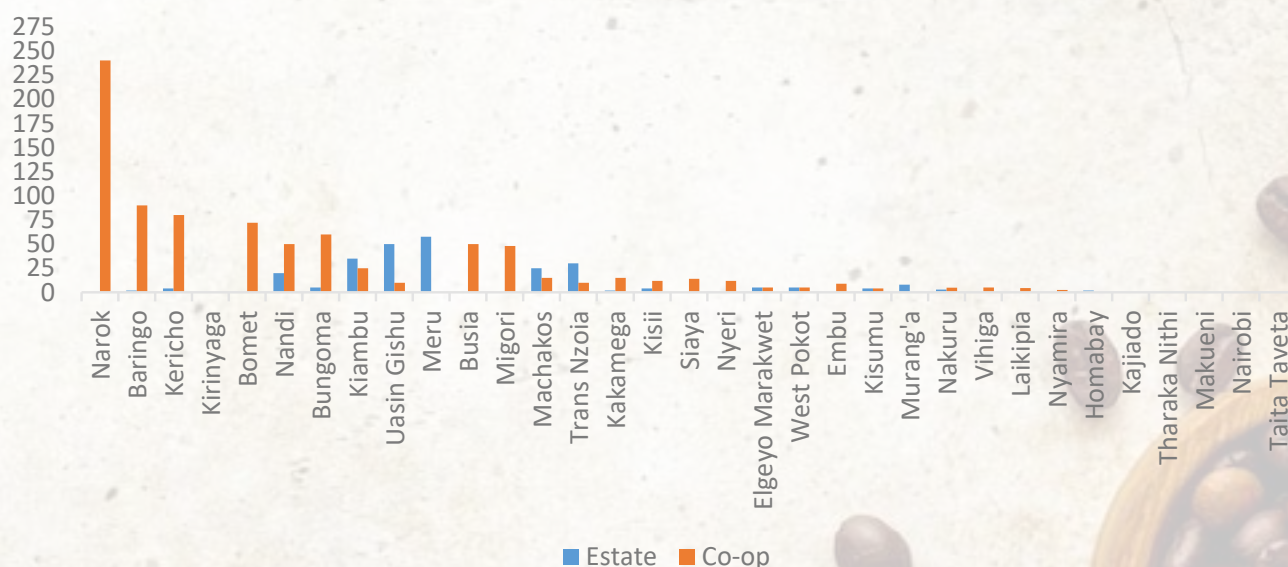

Figure 4: Newly planted area by county and grower category

Since independence, the area under coffee estimates peaked between 2000/01 and 2005/06 at 170,000 ha. Thereafter there has been a decline due to land pressure on land use and conversion of land in counties neighboring Nairobi mainly Kiambu, Murang'a and Machakos to real estates. In the last one decade, area under coffee stagnated

for both estates and co-operatives. below 30,000 ha and co-operatives averaging 85,000 ha. Figure 5 below illustrates the distribution of area planted under both the estates and smallholders from coffee year 2012/13 to coffee year 2021/22.

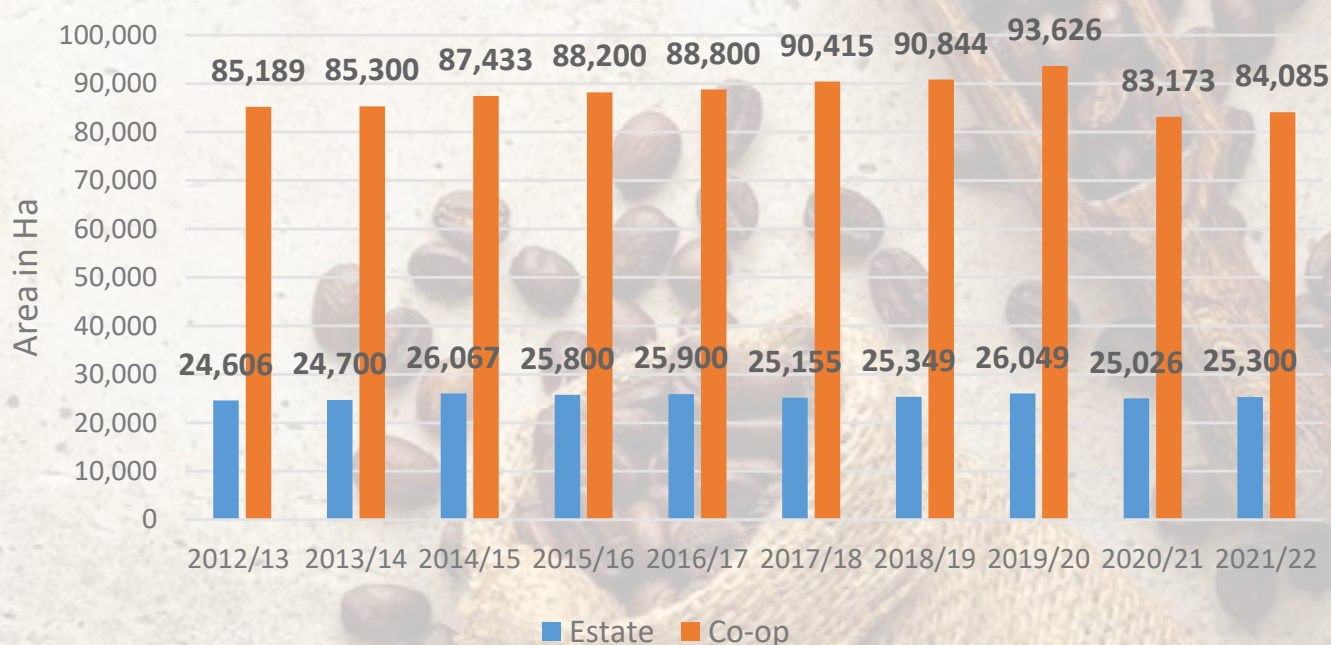

Figure 5: Coffee production trends

Number of Active Societies and Factories

In the period under review, 590 societies and 1,190 factories were active compared to 500 societies and 967 factories in 2020/21. On the other hand, the number of active estates increased from 2,521 in 2020/21 to 2,694 in 2021/22.

Many societies have been experiencing splits while several factories have been converted into societies. Table 3 shows the distribution of growers by counties.

Cherry Production

Small holder farmers deliver coffee to cooperative societies for primary processing and marketing. Coffee production in cooperative societies is Coffee Year Booked in cherry, Buni and parchment form based on the deliveries by smallholder farmers to factories. Once the coffee is sold, the farmers are paid based on the quantities of coffee delivered and the net

value of the coffee sold. Thus cherry payment rates only apply to smallholder farmer and not estate farmers. The total cherry production by smallholder farmers was 214.38 million Kilograms in coffee year 2021/22 as shown in Table 4 below.

Table 4: Cherry Production 2021/22

No	County	Total Cherry (Kg)	Total Buni (Kg)	Total Parchment (Kg)

Coffee deliveries by smallholder farmers to co-operative societies are in the form of cherry, parchment and Buni. Thus, farmers are paid through co-operative societies after their production have been sold. Sometimes, advance payments to farmers are made which are then deducted when the final payments are made. The payments have for a

long time been streamlined and the cash model adopted by some players in the coffee industry goes against the coffee regulations. Cherry hawking was Coffee Year Booked to be very rampant in the border counties like Busia, Bungoma, Migori, Kisii, Homa Bay and Tharaka Nithi counties. Table 5 below shows the highest cherry rates per county.

Table 5: Highest Cherry rate per county

Gakoe factory of Njuriga FCS in Nyeri county paid the highest rate of KES 130.00 nationally for the 2021/22 crop year followed by both Thimu and Mushagara factories of Baragwi FCS rate of KES 127.90 in Kirinyaga, Wanjegi-A factory of Kahuhia FCS in Murang'a KES 118.05. The lowest rate among the highest was KES 35.00. The high variation in payment rates by counties and within counties is an indication of differences in co-operative governance

Coffee Processing

Secondary processing of coffee takes place at the milling companies and unions. The companies receive parchment and Buni coffee for processing from both the small-scale farmers (co-operatives) and estate farmers. The estates growers were introduced around 1900 while the co-operatives were introduced in 1950's. Clean coffee production is mainly in two distinct grower categories namely smallholder (co-operative societies) and estates.

Coffee Estates

The dwindling production among estate farmers is attributable to the increased number of splits from the main estates and competition from other investments especially real estate, resulting in uprooting of coffee. Where the estates were originally registered under one name, subsequent splits have been recorded as a result of land successions. A number of estates farms have changed hands from the original ownership while others share the marks. The areas mostly affected include Kiambu, Murang'a and Kirinyaga counties. In counties like Trans Nzoia and Nandi as well as parts of Bungoma, Elgeyo Marakwet small planters have emerged in settlement areas on the basis of

levels, management skills, indebtedness and inefficiencies in processing. It is also important to note that coffee from Kericho, Nandi and Bungoma are competing effectively with traditional high-quality counties Nyeri, Kirinyaga, Murang'a, Kiambu, Embu and Meru. The highest parchment rate of KES 570.00 was paid by Saimo FCS in Baringo county while Kanyariri factory affiliated to Rugi FCS in Nyeri paid the highest Buni rate of KES 438.78.

However, there are ZA growers who are neither estates nor societies but still produce and deliver coffee to the respective mills. For purposes of this Coffee Year Book, they have been lumped together with the coffee estates growers. The smallholder farmers produced 36,299 MT (70%) of the national clean coffee in coffee year 2021/22 compared to 22,841 MT (66%) in coffee year 2020/21.

individual plots. The County governments in the affected Counties need to assess, register and license coffee farmers into small units which qualify for licensing in accordance with the individual counties. In other areas, individuals are withdrawing from co-operatives after attaining the minimum hectareage and thus acquired individually owned processing units.

In the previous coffee year, the East of Rift counties produced 23,610 MT (74%) compared to 38,931 MT (75%) produced in coffee year 2021/22. Table 6 shows the distribution of growers by Region.

Table 6: National production by grower category and region 2021/22 (MT)

Region/ grower category	Society		Estate		Total	
	2020/21	2021/22	2020/21	2021/22	2020/21	2021/22
East	16,596	26,952.80	9,013	11,978	25,610	38,931
West	7,244.30	9,346	2,658	3,575	8,902.30	12,921
Total	22,841	36,299.10	11,672	15,553	34,512	51,853
Percentage	66%	70%	34%	30%	100%	100%

The total clean coffee production in coffee year 2021/22 amounted to 51,852,633.67 Kg (51,853 MT) which was higher by 50.24% from previous season's production amounting to 34,512,155.69 Kg (34,512 MT) as shown in Table 7 below. This production is the highest ever in the

past two decades comparable only to the period prior to liberalization when production soured above 50,000 MT. The co-operatives grower category recorded a 59% (13,459 MT) increase while the estates grower category recorded a 33% (3,882 MT) increase.

Table 7: Clean Coffee Production by County and Grower Category

No	County	Estate (Kg)	Co-op (Kg)	Total (Kg)	%
1	Kiambu	8,669,417.51	1,967,631.32	10,637,048.82	20.51%

	National	15,553,434.80	36,299,198.87	51,852,633.67	100.00%

The main crop production in the period between September 2021 to December 2021 amounted to 37,072 MT (71.5%), while the early crop in the period between May 2022 to July 2022 was 14,779 MT (28.5%) making up the overall season's total clean coffee production of 51,853 MT. Figure below shows the proportion of coffee production by

each county. Kiambu produced 10,637 MT, followed by Kirinyaga (8,777 MT), Nyeri (6,823 MT), Murang'a (5,558 MT), Kericho (4,326 MT) and Bungoma (2,968 MT). Other top counties include Meru, Embu, Nandi and Machakos. The combined proportion of the top 10 counties was 90% as shown in Figure 4 below.

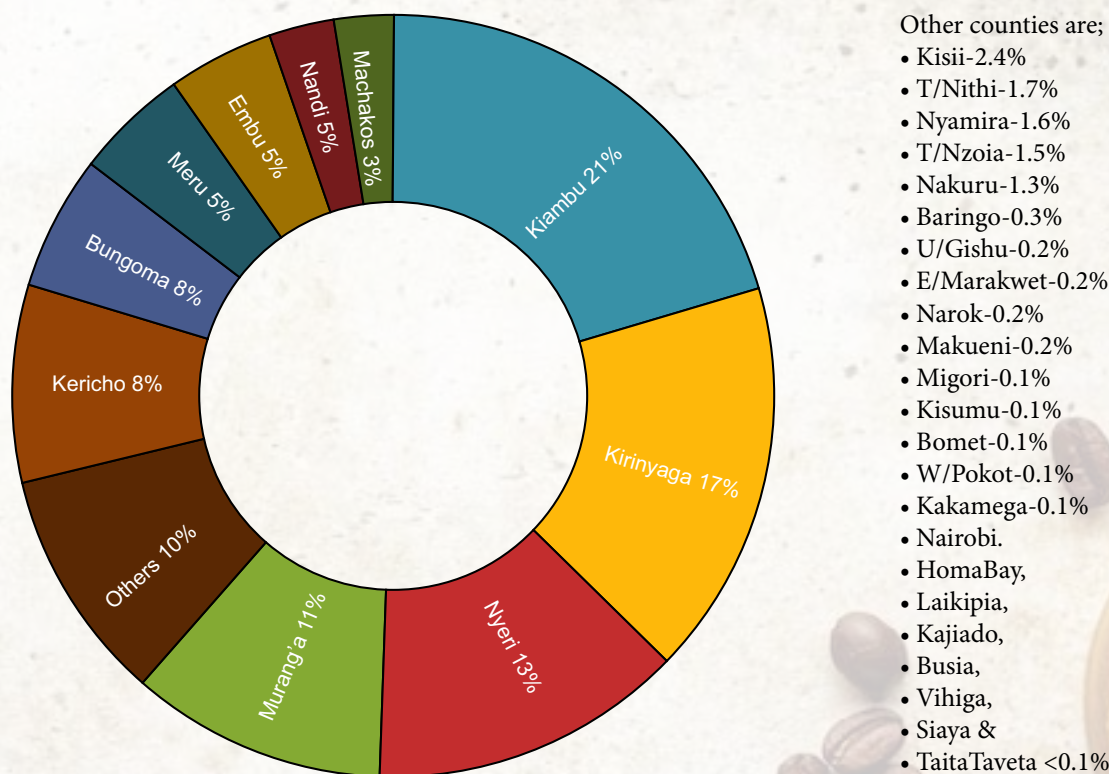

Figure 6: Distribution by Main Coffee Producing Counties

The production increase in Kiambu was 36%, Kirinyaga (46%), Nyeri (85%), Murang'a (79%), Kericho (46%), Bungoma (56%), Meru (54%), Embu (47%), Nandi (46%) and Machakos (77%). Clean coffee production trends for selected five coffee years is illustrated in

Figure 7 below. Kiambu county remains at the peak of production, while remarkable improvements have been recorded in Kericho, Bungoma and Nandi. On the other hand, Nyeri has reduced significantly.

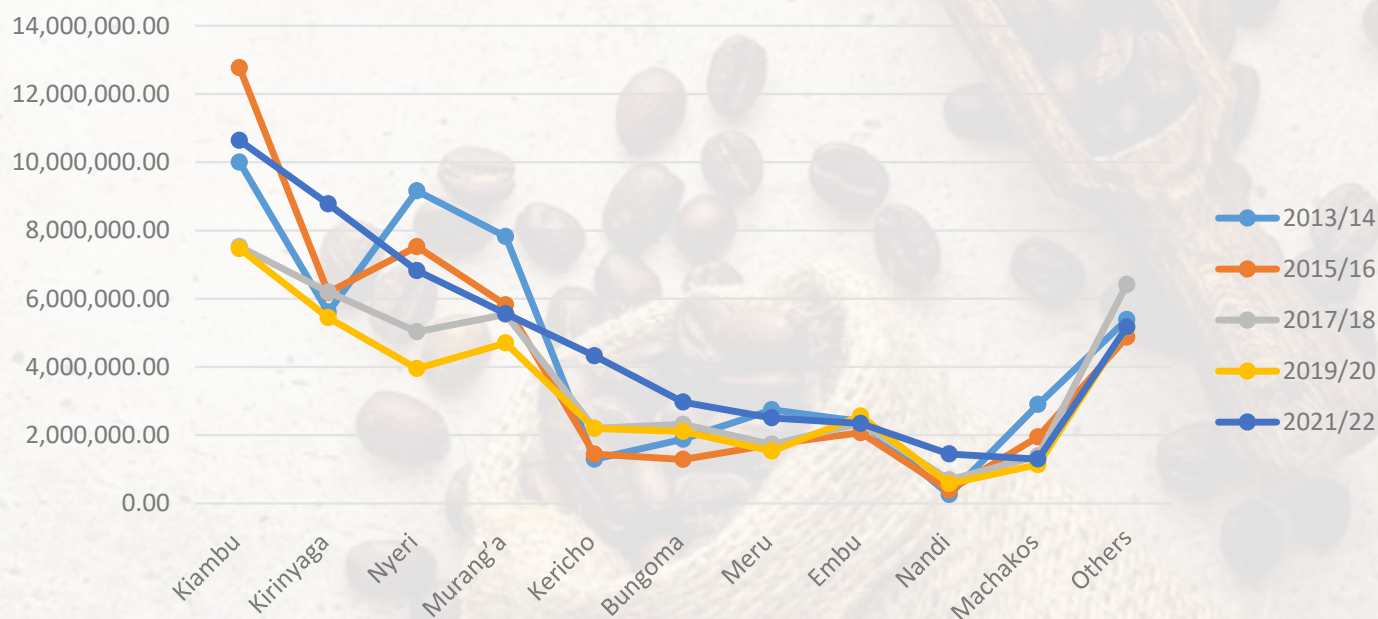

Figure 7: Coffee Production in Leading Counties

Kiambu County has been the top producer predominantly dominated by estate planters compared to other top producers dominated my co-operatives

Clean Coffee Production Trend for Ten Coffee Years

The highest national production since independence was realized in coffee year1987/88 of 128,862 MT. The production declined by nearly 64% to a national average of 45,000 MT except for 2021/22 when it increased dramatically to 51,853 MT as illustrated in Figure 8 below.

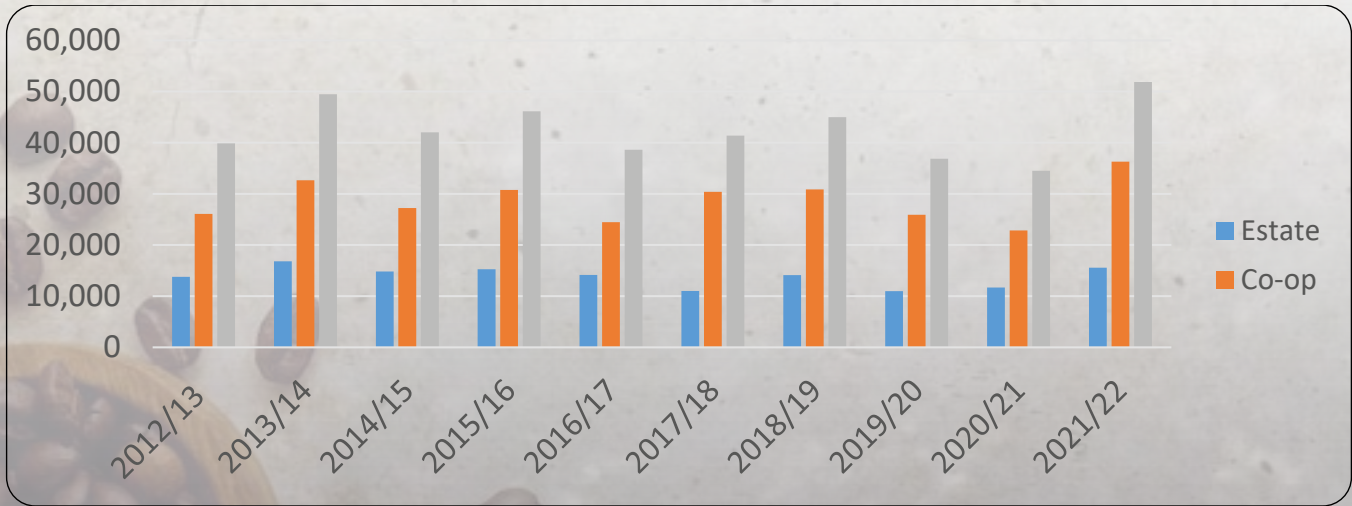

Figure 8: Coffee Production Trends

Coffee Processing

In the first quarter of the coffee year (Oct-Dec 2021), processed coffee was 15,512 MT (30%) while in the second quarter (Jan-Mar 2022), processed coffee by millers was 21,560 MT (42%). In third (April-June 2022) and fourth (July-September 2022) quarter, processed coffee volumes were 2,148 MT (4%) and

12,632 (24%) respectively. This is an indication that processing mainly takes place between October and March due to carry forwards and new production. The lowest secondary processing was in the period between July and September, being the period when most millers close for maintenances.

Clean Coffee Processing by Millers 2021-22

NKG Coffee mills had the highest milling share in 2021-22 coffee year at 24.6%, followed by Central Kenya Coffee Mill Ltd (18.0%), Kofinaf (15.4%), Kahawa Bora (13.9%)

and Sasini PLC (8.8%). The millers share is provided in Table 8 below.

Table 8: Processing by Miller and Grower Category 2021-22

The proportion of wet processed coffee was 93% (48,317 MT) and 7% (3,536 MT) for dry processed coffee. In 2020/21, wet processed coffee amounted to 31,623 MT against 2,883 MT of dry processed coffee.

This demonstrates that Kenya's coffee is dominated by main and miscellaneous grades as shown in Table 9 below.

Table 9: Table: Wet and dry processed coffee 2021-22

The clean coffee grades produced by the millers in 2021-22 varied up to 19 different grades. The top grades produced in the country were AA (21.7%), AB (40.9%), C (15.3%)

and PB (4.9%). Table 10 below shows the distribution of grades by contributing regions.

Table 10: Clean coffee grades by contributing region

GRADE	EAST OF RIFT	WEST OF RIFT	TOTAL	%

TOTAL	38,436,817.59	12,960,457.88	51,397,275.47	100.00%

The contribution by grades table shows that out of the total clean coffee production by grower category, the proportion of grade AA contributed by estate planters was 15.9% while smallholders contributed 24.2%. For grade AB, estate planters' proportion was 40.1% while for smallholders it was 41.2%. Grade C and PB, the proportion for estate planters was 20.2% and 4.7%

respectively. Smallholder contribution was 13.2% and 4.9% respectively. This finding is against the narrative that coffee produced by estate planters are of higher quality than those produced by smallholder farmers. The smallholder farmers thus lead both in volumes and quality of coffee produced.

Table 11: Clean grades by grower category

GRADE	Estate	Society	Grand Total
AA	2,470,805.39	8,663,222.55	11,134,027.94

Total	15,533,539.53	35,863,735.94	51,397,275.47

The clean coffee grades distribution by counties shows that the highest proportion of grade AA was contributed by Kirinyaga (28%) and Nyeri (27%), Uasin Gishu contributed the highest proportion of AB grade (49%) while Kiambu, Meru and Machakos each contributed 22% of grade C. Kericho and Tharaka Nithi led in the proportion of PB (7%) relative to the total clean coffee production by individual county.

It's worth noting that the highest cherry paying co-operatives were from Kirinyaga, Nyeri and Murang'a Counties. Analysis of coffee by grades shows there is a positive causality between production of grade AA coffee and the highest cherry rate paid to smallholder farmers as can be seen in Table 12 below.

Table 12: Top Grades Contribution By Counties 2021/22

Clean coffee production forecast 2022/23

The crop year 2021-22 realized an improvement in production by over 50% compared to the previous year. Coffee production is biennial and cyclic in nature holding all other production factors remain constant. Towards end of 2022 and early 2023, the country experienced very adverse effects of drought in the coffee zones which

affected flowering and berry formation. This will result into coffee lights and poor-quality coffee. Table 13 below shows that the overall production will decrease from the current 51,853 MT to approximately 46,000 MT in coffee year 2022/23.

Table 13: Clean Coffee Production Forecast- 2022/23

Coffee Quality

The country produces quality Arabica beans which are generally recognized and used to upgrade other relatively inferior brands. Foreign buyers of Kenyan coffee in destinations such as Germany, Sweden and Belgium, the USA and Saudi Arabia prefer the physical density, long shelf life, vibrant acidity, intense cup profile, and other distinctive aromatics that makes it stand out among Arabica coffee produced in other parts of the world.

Quality of coffee is a function of good coffee husbandry practices that include how coffee is processed, wet milling,

storage and handling. The uniqueness of country's coffee is attributed to the volcanic soils, climatic conditions, use of certified varieties and good farming practices. The clean coffee is segregated into seven standard grades classified on the basis of raw, roast and liquor attributes. About 30% of coffee produced in Kenya is considered specialty with the remaining proportion believed to be either commercial and low-quality niches.

Emerging Coffee Processing Techniques

Kenya is increasing seeking to diversify processing of coffee to offer a wide range of choices to foreign buyers. The natural coffee often graded as NH1 and NH2 are increas-

ingly gaining popularity among foreign buyers and so is honey coffee. There is a growing demand for natural processed coffee because of its complexity in flavors.

Natural process coffee

Natural (or Dry) process leaves the fruit on the seed for the duration of the drying process. After the cherries have dried, the fruit is removed. This is the oldest method of processing coffee and is more ecologically friendly, as it does not require water. The cherries are picked ripe, which is important since the fruit itself imparts flavor during this process. They are sorted and weighed before moving to the drying area. Often the drying process is on raised beds,

which allows for airflow around the whole cherry. The fermentation process happens as the cherries dry and takes constant attention. It can take 3-4 weeks for the cherries to dry and the seeds inside to reach 11% moisture. After the drying process, the coffee goes through a dry mill which removes the fruit and the parchment layer around the seed. After a final sorting, the coffee is bagged in burlap and ready to ship.

Honey Processed coffee

The **Honey Process** falls somewhere between the washed and natural processes. Like washed coffee, the fruit skin is removed within 24 hours of harvest. The mucilage is left on the seed to dry, which is reminiscent of the natural process in that part of the fruit fibers stay in contact with the seed during the drying process. Like the natural process, the honey process is also more ecologically friendly than the

washed process as water is not required. The seeds can be dried in one of several ways including on a tarp on a patio under full sun or piled in a greenhouse for more concentrated fermentation before being raked to an even layer. The fermentation and drying processes take place over 3-4 weeks, depending on weather and the discretion of the producers.

Market Structure and Trends

The evolving nature of the coffee market and demand for high quality coffee for specialty coffee segment is of great importance. Priority concerns for Kenya's coffee industry stakeholders however remains quality sustainability and stable supply. Producers and buyers often use certifications to promote their products. The growing demand for traceability and transparency in the value chain as well

as the expanding digital marketplaces enhances direct coffee trade between local producers and foreign buyers. In Kenya and in the rest of the world, multinational companies are involved in coffee trading, and roasting further consolidates the market, putting pressure on prices along the entire chain.

Clean Coffee Marketing

Coffee is marketed through both the Nairobi Coffee Exchange (NCE) and direct sales. Table 14 below shows marketed volumes and value for the past one decade. The

general trends indicate that the volumes of coffee offered through direct sales have been increasing over years from 3,724 MT to present 11,841 MT.

Table 14: Auctions and direct sales volumes and values 2012/13-2021/22

YEAR	Auction Sales		Direct Sales		Total	
	Weight (MT)	Value (\$) million	Weight (MT)	Value (\$) million	Weight (MT)	Value (\$) million
2012/13	38,141	127.16	3,724	17.99	41,865	145.16
2013/14	40,928	174.15	8,282	42.99	49,210	217.14
2014/15	34,754	142.51	7,183	40.03	41,937	182.54
2015/16	38,376	148.93	7,544	41.05	45,919	189.98
2016/17	34,091	159.2	6,756	43.74	40,846	202.94
2017/18	35,676	145.22	7,962	44.98	43,638	190.2
2018/19	35,605	109.56	10,283	47.95	45,888	157.52
2019/20	24,531	92.76	13,521	68.28	38,052	161.04
2020/21	25,126	141.24	10,444	68.24	35,570	209.48
2021/22	38,790	227.33	11,841	84.55	50,631	311.88

Coffee prices all over the world are characterized by recurring cycle of a brief period of high coffee prices followed by an extended period of low prices as can be seen in Table above. This has been the case with Kenya since 2012/13 to date, lowest auction prices were realized in 2012/13 and which recurred in 2018/19. Prices rose temporarily in 2013/14 and gradually declined in the

period between 2014/15 and 2015/16. This was followed by another increase in 2016/17 when the production was low. In the period between 2017/18 and 2018/19 production increased there was a sharp decline in auction prices to below US\$ 150.00 Since 2019/20 to present period, local prices have shown a significant rise.

Marketing Performance by Individual Marketers in 2021/22

Table 15 below shows the combined sales for both the auction and direct sales in terms of weight and value. The leading marketer was Tropical Farm Management Kenya Limited (27.7%) followed by Coffee Management Services

(24.6%) and Sucastainability Kenya Ltd (14.4%). Others top marketers were Aristocrats Coffee & Tea and Oaklands Coffee Marketing.

Table 15: Marketers performance (Auction and Direct sales)

Marketer	Weight (Kg)	No 60-Kg Bags	Gross Proceeds (\$)	Average Price/50 Kg	%-share
Tropical Farm Management (K) Ltd.	14,038,260.00	233,971	88,031,084.29	313.54	27.70%

African Coffee Roasters EPZ Ltd	16,980.00	283	93,611.02	275.65	0.00%
Ndirangu	300	5	2,500.00	416.67	0.00%
Grand Total	50,630,735.47	843,846	311,883,871.46	308	100.00%

The average coffee prices per 50 Kg bag by grades were above US\$ 300 for AA, AB and PB. The total weight offered for sale at the auction was 38,769 MT valued at US\$ 227.24 million at an average price per bag of US\$ 293.07. During previous coffee year the total weight offered for sale was

33,976 MT valued at US\$ 210.42 million at an average price per bag of US\$ 309.67. Therefore, the auction prices per bag reduced by 5.17%. The auction grades performance is provided in Table 16 below.

Table 16: Auction performance by Grade 2021/22

Grade	Bags Bought	Weight Bought	Min (\$)	Max (\$)	Value (\$)	Average price/50 Kg
AA	130,128	8,004,143.00	83	502	58,871,492.16	367.76

Coffee Marketing

The potential markets for Kenya's coffee include countries in Africa such as Djibouti, Eritrea, Rwanda, South Sudan, Sudan, Tanzania, Uganda, Egypt, DRC and Zambia. Countries such as Saudi Arabia, Israel, Jordan and Syria have shown immense interest in Kenya's coffee over the last few years. However, this region is unique for its preference of lower quality coffee such as MH's and ML's. The Kenyan, coffee market is structured in to five key segments namely the traditional, specialty, regional, emerging and domestic markets.

Traditional Market

This market segment covers the countries within the European Union (EU) e.g. Germany, Belgium Sweden. This segment consumes both the specialty coffee and the commercial grade. The EU trading bloc forms the main component of the Traditional Market segment. They command over 55% of Kenya's annual coffee production.

Specialty Market

This coffee market segment includes United States of America (USA) and Japan. This market consumes high quality coffee coffees (premium coffee grades Kenya AA, AB and PB) and usually pay high prices for the same. They command about 20% of the total annual production.

The specialty market which comprises the USA, Canada, Japan and Norway commands the second largest share

of the Kenya's coffee market after the traditional markets majorly in the European Union (EU) trading block. The combined uptake from Kenya to the four destinations was 10,603.80 MT valued at US\$ 98. 01 million in 2020/21 compared with 10,918.50 MT valued at US\$ 85.59 million in in season 2021/22. The USA market currently commands 74% market share of the total specialty market segment although Norway currently offers lucrative prices than any other destinations. Norway and Japan only accounted for the 11% of the market share while Canada has the lowest share of the specialty market currently at 4% as shown in Figure 8.

Since season 2017/18, the specialty market segment controls between an average 23% overall market share the bulk of which is contributed by the USA.

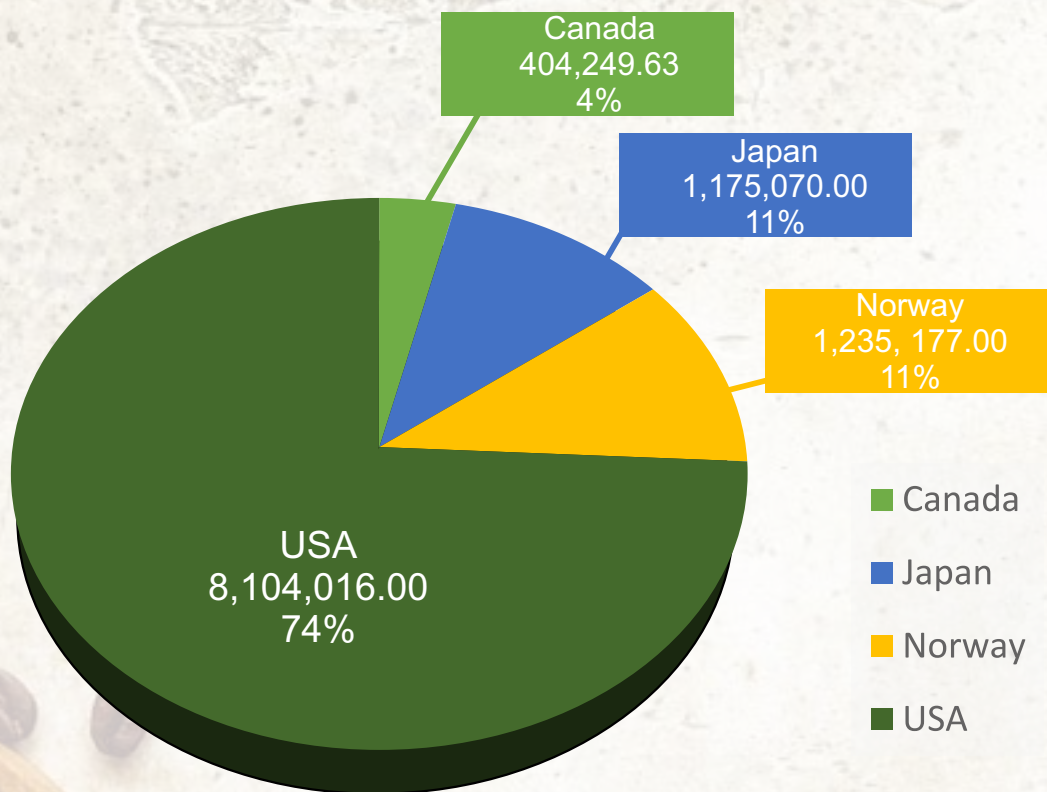

Figure 9: Kenya's coffee exports to specialty market 2021/22

Emerging Market

This market segment covers countries in the Gulf Region such as United Arab Emirates (UAE), Israel, Iran, Oman, and Jordan. The Gulf Region market mostly consumes the low-quality coffee grades mainly MH, ML and T while the Korea buys both specialty coffees and the commercial coffee grades. They command about 18% of the total Kenya's annual production.

Domestic Market

This is the local market for the Kenya coffee. The culture for coffee drinking has not been well developed. To promote domestic consumption of Kenyan coffee among the Kenyans, the Directorate adopted a strategy of partnering with the institution of higher learning (Universities and colleges). So far domestic consumption of Kenyan coffee has grown from about 1% in 2009/10 to an average of 5% in 2021/22 as per survey Coffee Year Book done in 2022.

Domestic Coffee Consumption Trends

In coffee year 2010/11, local consumption proportion was only 1% of the national production. However, the country has experienced growth in local consumption mainly due to the promotions conducted within Universities in Kenya targeting the youths. The growth potential is based on the hypothesis that university students become high income earners compared to students in other middle level colleges. The current proportion consumed locally is 3% of the national production.

The 10 years average annual growth is 3.8% for the domestic market. The domestic consumption level in the country increased from 1,655.85 MT equivalent to 27,598 (60-Kg bags) in coffee year 2020/21 to 1,722 MT equivalent to 28,700 (60-Kg bags) in coffee year 2021/22.

Number of Coffee Houses

The increasing number of stakeholders engaging in value addition has occasioned an increased number of coffee consumption outlets, this is due to steady supply of processed coffee.

The number of coffee outlets increased from 231 in 2019 to 506 in 2021 while the number of coffee stakeholders engaged in the roasting and packaging business from 25 in 2019/20 to present 35 in 2020/21. Coffee shops and big hotels are the main drivers of the domestic consumption in cities and major towns such as Nairobi, Mombasa, Kisumu, Nakuru and Eldoret.

Accordingly, the 2019 KPHC Volume II Coffee Year Book shows that Kenya's population was 47.6 million people. The domestic survey established that in coffee year 2020/21, consumption was 1.7 million kilograms therefore the Per Capita Coffee Consumption for Kenya is currently at 0.04 Kg per person.

The domestic coffee consumption goal as defined in the proposed National domestic coffee consumption strategy 2021 is to "Develop a coffee drinking culture among the middle-class" with the main output of increasing uptake to 2,500 MTs by the year 2025.

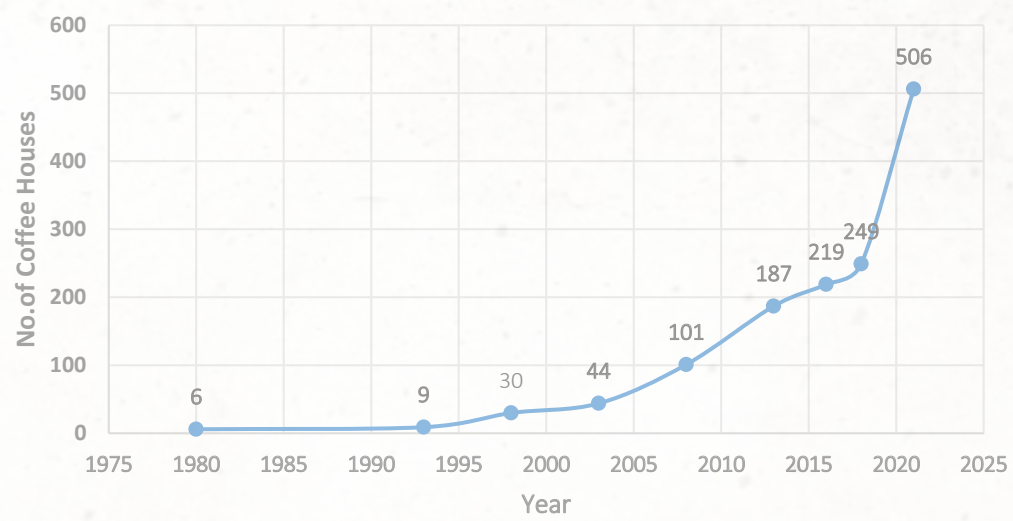

Figure 10: graph showing trend of number of coffee houses from 1980-2021

Coffee Exports by Destinations, Volumes & Value

Export Volume and Value Trends

Table below shows the export volumes and values from coffee year 2012/13 to coffee year 2021/22. The highest volume so far of 50,600 MT was attained in 2018/19. The export volume per year averages 44,000 MT. However, comparing 2020/21 and 2021/22, there was some little improvement in volumes exported. The value realized in 2021/22 was the highest in the last 10 years.

Table 20: Export volume and value trends

Year	Export Volume (MT)	Export Earnings (KES Billion)
2012/13	49,031	18.21
2013/14	47,175	19.73
2014/15	44,064	21.01

Export Market Share by Traders

During the period under review, Ibero (K) Limited was the top exporter by 16.5% followed by TFMK with 10.7% of the total export share. Other top exporters were C. Dor-

mans (10.2%), CMS (9.2%) while Taylor Winch volumes amounted to 8.4%. Details are available in Table 22 below.

Table 22: Exporters performance 2021/22

Coffee Exports by Form

The exports are mainly in green bean form accounting for between 97%-99% as can be seen in figure 10 below. Only small quantities of processed coffee are exported.

Significant volumes of processed coffee are consumed within the county. The figures are Coffee Year Booked in metric tonnes.

Figure 11: Coffee exports by form

Coffee Imports

Imported roasted/ground coffee amounted to 0.30 MT in 2019/20, 0.76 MT in 2020/21 and further increased to 59.08 MT in 2021/22 while imported soluble coffee amounted

to 7.54 MT in 2019/20, 14.92 MT in 2020/21 and further increased to 9,678.25 MT in 2021/22.

Table 23: Coffee imports by form and origin in kilograms

Warehouse Stock Levels

There was both inward and outward movements of coffee stocks from respective warehouses for both export and local trade. The peak months for stock held were February 2022 (441,237 bags), March 2022 (439,537 bags) and April 2022 (382,370 bags) while the period of lowest stock was

January 2022 (94,729 bags). Total stock carryover for coffee year 2021-22 was 15,072 MT (251,205 -60 Kg bags). Monthly distribution of coffee stock by warehouse is provided in Table 24 below.

Table 24: Monthly storage analysis for the year 2021-22-60 kg bags

Gross Margins and Cost of Production

The Table 25 shows cost of production at 3 management levels. The scenario of farmer producing at 10 Kgs per tree management level is considered as the expert farmer, while the producers of 5 kg and 2 Kgs per tree are considered good and average farmers respectively.

The expert farmer production cost for Ruiru 11 was while Batian was and 31, the average level production, costs were KES 35 and 36 respectively. The cost of production for traditional varieties for the expert farmer was KES 38 while the average farmer was KES 40 and 42 respectively. The average cost of processing in all the levels was Ksh 14 per Kg.

The gross margin per acre for the expert farmer were KES 491,891 and KES 375,197 for Ruiru 11 and Batian respec-

tively while the average farmer gross margins were KES 221,281 and 158,328 respectively for the same varieties. The gross margin for the expert farmer for the traditional varieties was KES 221,103 and KES 106,616 and 41,198 for the average farmer respectively.

On average, the gross margin for the traditional varieties (SL 28, SL 34 and K7) were lower compared to the improved varieties and the attendant cost of production was higher and this was attributed to the increased cost of fungicides and since these varieties are susceptible to Coffee Berry Disease(CBD) and Coffee Leaf Rust (CLR), farmers have to keep on spraying against these diseases. A fixed management cost of 5% of the total production cost was considered to act as a payment to the farmer in case he/she was doing other on farm or off farm activities

Source: KALRO - CRI

Notes

- Labour costs have increased thus increasing the cost of harvesting, pruning and other labour costs such as weeding, and inputs application
- The cost of inputs in 2022 was high a 50 Kg bag of NPK was costing at KES 6,500 from KES 5,000 in 2021/22 and CAN KES 5,600 from KES 4,000

Total Export value US dollars)	292,257,245.68	298,556,882.23
Total Export value (KES)	27,071,670,776.57	34,365,706,476.89
Total No Bags Exported in (60 Kgs)	696,613	713,394
Export average price per 60 Kgs bag (US dollars)	419.54	418.21
Top 5 export destinations (60-Kgs Bag)	Belgium (148,805 bags)-21 %	USA (135,067 bags)-19%
	USA (102,794 bags)-15%	Belgium (134,868 bags)-19%
	Germany (92,455 bags)-13%	Germany (101,476)-14%
	South Korea (67,324 bags)-10%	South Korea (72,465)-10%
	Sweden (49,193 bags)-7%	Sweden (36,559 bags)-5%
Total Import weight in Kg and bags	658,929.27 (10,982)	3,769,314.71 (62,822)
Total import value in US dollars	2,684,989.75	19,524,607.95
National average cherry payout rate 2020/21 (KES/Kg)-Weighted	86.79	78.99
Highest cherry rate in KES/Kg	Kirinyaga County (Kibirigwi FCS-Thunguri Factory)-118.60	Nyeri County, (Njuriga FCS, Gakoe Factory) 130.00
Nairobi Coffee Exchange weight and bags bought	25,125,678.00 (407,432)	38,790,263.00 (646,509)
Nairobi Coffee Exchange value in US dollars	141,240,377.46	227,332,870.42
Nairobi Coffee Exchange average price (US\$ per 50 Kgs bag)	281.07	293.03
Direct Sales weight in Kg and 60 kg bags	10,488,332.00 (174,806)	11,840,472.47 (197,341)
Direct Sales value in US dollars	68,573,243.00	84,551,001.04
Direct Sales average price in US\$ per 50 Kgs bag	326.9	357.04
Weighted National average price/50 Kgs bag (Auction +Direct Sales) in US dollars	294.57	308
Ratio of Estate: Smallholder production	31:69	30:70
Number of active co-operatives/factories	500/967	590/1190
Number of active estates	2,521	2,694

Notes: Kenya's coffee flowering period for fly/early crop is in September/October period while main/late crop is in February/March. Harvesting periods for are May-July and September-December respectively. Marketing periods for fly/early is July-January while main/late crop is brought to the market in December-January period. The ratio of fly to main crop is estimated to be between 45 : 55 all factors constant.
